Hypocalcemia & Blood Product Transfusion

During Trauma Situations

- Why calcium is important in trauma, when due to blood loss calcium is depleted?

calcium is needed for muscle contraction
- think heart is a large muscle

Administration

- calcium chloride : 1 gram IV for every MTP pack infused
- do not administer into tissues - can cause severe necrosis

Recommendations

- over 3-5 minutes in largest available IV line

Compatibility

- if no central line use deep vein
- do not use small hand or foot vein if possible
- do not infuse in same line as carbonates, phosphates, sulfates, or tartrates Containing Solution
