Professional Summary

PharmD and MS Pharmaceutical Sciences targeting Formulations Technical Specialist roles supporting solid oral dosage forms, clinical/registration batch readiness, stability samples, GMP documentation, SOP revision, and change controls. Combines formulation science training, regulated research documentation, laboratory workflows, and 15+ years of pharmacy operations experience with strong attention to detail, documentation discipline, GMP/GxP awareness, and cross-functional execution skills.

Core Competencies

Formulation Development Support • Tablets & Capsules • Stability Samples • Clinical/Registration Batch Readiness • Batch Scheduling • GMP Batch Records • SOP Writing/Revision • Change Controls • Raw Material Coordination • GMP/GxP • Data Integrity • Documentation Control • FDA/ICH Guidance • Project Coordination • Process Improvement

Technical Skills

- **Formulations/GMP:** Solid oral dosage forms, clinical trial material workflows, raw material coordination, SOPs, controlled forms, change controls, batch record awareness, CAPA/deviation awareness, data integrity, and regulated documentation.
- **Lab/Data:** EC50 assays, 96-well workflows, resazurin readouts, serial dilutions, sterile technique, BSL-2 practices, plate reader exports, GraphPad Prism, Excel, statistical analysis, and technical documentation.

Research and Technical Projects

- Executed structured pharmaceutical research workflows requiring precise sample preparation, controlled execution, documentation discipline, and accurate data capture across antileishmanial/cytotoxic agents.
- Performed 96-well dose-response assays and serial dilution workflows; maintained technical accuracy, sample traceability, and repeatable execution relevant to stability and batch-support activities.
- Analyzed EC50 values in GraphPad Prism/Excel and summarized results for scientific decision-making, project updates, and cross-functional communication.

Education

Pacific University School of Pharmacy | PharmD, 2025; MS Pharmaceutical Sciences, Aug 2026

Relevant Coursework

Relevant coursework: clinical trial design, data management, QA, operations, monitoring, regulatory compliance, privacy law, and drug development product management; training supports formulation development, GMP readiness, and solid oral dosage form understanding.

Clinical and Pharmacy Experience

Pharmacist Intern / APPE Research and Clinical Rotations | 2024–2025 |

Research Lab • Inpatient Health System

- Supported research documentation, literature review, experimental design, clinical documentation, SOP/GMP documentation awareness, and source-documentation workflows relevant to regulated pharmaceutical development.
- Collaborated across regulated care and research teams with awareness of protocol compliance, documentation accuracy, project logistics, scheduling discipline, quality expectations, and patient safety.

Pharmacy Technician Experience | 2007–2022 | Retail, hospital, and centralized pharmacy settings

- Built 15+ years of pharmacy operations experience spanning inventory/workflow coordination, documentation accuracy, team training, quality-focused practices, patient safety, and regulated pharmacy operations applicable to GMP manufacturing support.
