

Flu Shot?

Who should get a flu shot?

Everyone 6 months and older in the United States should get an influenza (flu) vaccine every season with rare exception.

Which shot is appropriate for you?

Different influenza (flu) vaccines are approved for use in people in different age groups.

Nasal spray flu vaccine

The nasal spray flu vaccine is approved for use in healthy non-pregnant people, 2 through 49 years old. People who are pregnant and people with certain medical conditions should not get the nasal spray flu vaccine.

Quadrivalent influenza (flu) vaccine

All flu vaccines in the United States are quadrivalent. Different vaccines are approved for different age groups.

High-Dose Quadrivalent vaccine

In the United States, Fluzone High-Dose Quadrivalent vaccine is approved only for people 65 years and older. Fluzone High-Dose Quadrivalent is not approved for people younger than 65 years or for people of any age with a history of severe allergic reaction to any influenza vaccine or to vaccine components other than eggs.

Cell-based flu vaccines

Flucelvax Quadrivalent is the only influenza vaccine in use in the United States for which the vaccine viruses are grown in a mammalian cell culture. Some people who have had an allergic reaction to other kinds of flu vaccines might be able to get Flucelvax Quadrivalent.

Recombinant Flu Vaccine

Recombinant flu vaccines do not use the flu virus or chicken eggs in the manufacturing process. Recombinant flu vaccine (brand name: Flublok Quadrivalent) is one of the three vaccines that are preferentially recommended for people 65 years and older.

Flu Shot?

What are the symptoms of flu?

Fever or feeling feverish/chills, cough, sore throat, runny or stuffy nose, muscle or body aches, headaches, fatigue (tiredness)

Who should get a flu shot?

Everyone 6 months and older in the United States should get an influenza (flu) vaccine every season with rare exception.

Which shot is appropriate for you?

Different influenza (flu) vaccines are approved for use in people in different age groups.

Nasal spray flu vaccine

- Non-pregnant
- Age 2 to 49 year old without any medical conditions

Quadrivalent flu vaccine

Protect against four different flu viruses, including two influenza A viruses and two influenza B viruses.

- Anyone who is under 65 year old and eligible for flu vaccine.

Cell-based flu vaccines

cell-based vaccines are grown in cultured cells of mammalian origin instead of eggs.

- 6 months and older.

High-Dose Quadrivalent vaccine

- Age 65+

Recombinant Flu Vaccine

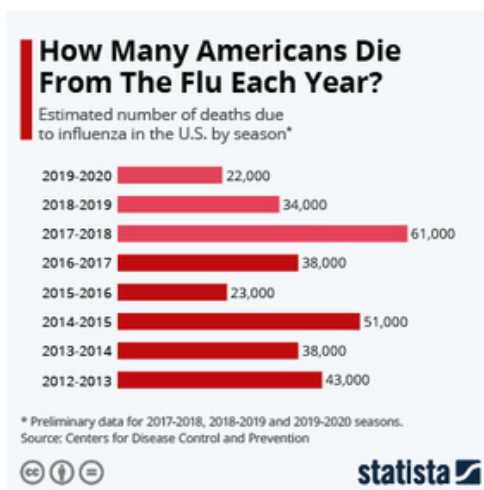

Do not use flu virus or Chicken eggs in manufacturing.

- Flublox for 65+
- 65+ with allergies or can not get virus component.

Why it is important to get flu shot?

The best way to reduce your risk from seasonal flu and its potentially serious complications is to get vaccinated every year. Flu vaccine prevents 7.5 million influenza illnesses, 3.7 million medical visits, 105,000 hospitalizations, and 6,300 influenza-associated deaths.
