To Whom It May Concern:

I am happy to provide a letter of recommendation for Harmanjit (Harman) Kaur to accompany her application to the APhA Experiential Program in Association Management & Leadership. Harman is currently a P2 student in the PharmD program at Pacific University School of Pharmacy, where I am a faculty. In addition to instructing Harman in the PharmD curriculum, I am also Harman's faculty advisor, and more recently, offered Harman a slot in my lab to conduct her Master's level research. Therefore, I believe that I can provide some insight into why Harman should be considered for this program.

Harman stands out to me in her curiosity and enthusiasm to learn about all aspects of pharmacy. She will often drop by my office to chat about a new drug or treatment for a disease state that she just learned about and always comes armed with additional and interesting questions. When I consider the engagement that Harman shows towards her studies, as well as to the pharmacy profession, it is made even more impressive when I reflect on how hard Harman has had to work to keep up her academic standing while balancing family responsibilities at home. Harman is a first-generation student and also a primary caregiver. While the academic rigor of our accelerated program takes a toll on some of our students, Harman has steadfastly remained motivated and focused on her end goal, which is to gain the requisite leadership skills and drug information knowledge to secure a position in the biomedical research industry, where she plans to develop and bring to market new drugs. Harman has worked towards this goal by serving in a leadership position within our School of Pharmacy Industry Pharmacy Organization (IPhO) chapter and more recently by matriculating into our Joint PharmD/Master's in Pharmaceutical Sciences program where she is beginning to conduct research in my laboratory on the neglected tropical disease leishmaniasis.

I believe that the APhA Experiential Program aligns well with Harman's overall goals and can provide her with more insight into the governance structures operating within pharmacy and the pharmaceutical sciences, offer her advanced career and leadership opportunities, as well guided mentorship to enhance her written and oral communication skills. Thus, I give Harman my enthusiastic endorsement as a candidate for this program.

Sincerely,

Nicola Carter, PhD

Associate Professor of Pharmaceutical Science, Pacific University School of Pharmacy
